

2022 Consumer Confidence Report Data

WRIGHTSTOWN WATERWORKS, PWS ID: 40504640

Este informe contiene información importante acerca de su agua potable. Haga que alguien lo traduzca para usted, o hable con alguien que lo entienda.

Dlaim ntawv tshaabzu nuav muaj lug tseemceeb heev nyob rua huv kws has txug cov dlej mej haus. Kuas ib tug paab txhais rua koj, los nrug ib tug kws paub lug thaam.

Water System Information

If you would like to know more about the information contained in this report or if you would like a copy of the source water assessment, please contact Andy Vickman at (920) 532-0434.

Opportunity For Input on Decisions Affecting your Water Quality

If you would like to learn more or have any questions, you are welcome to attend the Village of Wrightstown Board of Trustees meeting every first and third Tuesday of each month at 6:00pm, at the Village Hall community room located at 352 High Street.

Health Information

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's safe drinking water hotline (800-426-4791).

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune systems disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbial contaminants are available from the Environmental Protection Agency's safe drinking water hotline (800-426-4791).

Source of Water

Source ID	Source	Depth (in feet)	Status
2	Groundwater	635	Emergency; not used in 2022
4	Groundwater	665	Emergency; not used in 2022
10	Purchased Surface Water from Green Bay Water (40504563)	n/a	Active

Purchased Water

PWS ID	PWS Name
40504563	ASHWAUBENON WATERWORKS

Educational Information

The sources of drinking water, both tap water and bottled water, include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations and wildlife.
- Inorganic contaminants, such as salts and metals, which can be naturally- occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining or farming.
- Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban stormwater runoff and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff and septic systems.
- Radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. FDA regulations establish limits for contaminants in bottled water, which shall provide the same protection for public health.

Detected Contaminants from the Wrightstown Distribution System

Your water was tested for many contaminants last year. We are allowed to monitor for some contaminants less frequently than once a year. The following tables list only those contaminants which were detected in your water. If a contaminant was detected last year, it will appear in the following tables without a sample date. If the contaminant was not monitored last year, but was detected within the last 5 years, it will appear in the tables below with the sample date.

Disinfection Byproducts

Contaminant (units)	Site	MCL	MCLG	Level Found	Range	Violation	Typical Source of Contaminant
HAA5 (ppb)	D-5	60	60	14	14	No	By-product of drinking water chlorination
TTHM (ppb)	D-5	80	0	57.4	57.4	No	By-product of drinking water chlorination

Inorganic Contaminants

Contaminant (units)	Action Level	MCLG	90th Percentile Level Found	# of Results	Sample Date (if prior to 2021)	Violation	Typical Source of Contaminant
COPPER (ppm)	AL=1.3	1.3	0.7050	0 of 10 results above the AL.	9/22/2020	No	Corrosion of household plumbing systems; Erosion of natural deposits; Leaching from wood preservatives
LEAD (ppb)	AL=15	0	6.30	1 of 10 results above the AL.	9/22/2020	No	Corrosion of household plumbing systems; Erosion of natural deposits

Additional Health Information

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Wrightstown Waterworks is responsible for providing high quality drinking water but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at www.epa.gov/safewater/lead.

Detected Contaminants from Purchased Water

Our water system purchases water from Green Bay Water Utility. In addition to the detected contaminants listed above, these are the results from the water we purchase from Green Bay.

Disinfection Byproducts

Contaminant (units)	MCL	MCLG	Level Found	Range	Violation
BROMATE (ppb)	10	10	4.6	0-4.6	No

Inorganic Contaminants

Contaminant (units)	MCL	MCLG	Level Found	Range	Violation	Typical Source of Contaminant
ARSENIC (ppb)	10	n/a	1.10	Nd-1.10	No	Erosion of natural deposits; Runoff from orchards; Runoff from glass and electronics production wastes
BARIUM (ppm)	2	2	.02	.019-0.02	No	Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits
FLUORIDE (ppm)	4	4	0.81	0.64-0.81	No	Erosion of natural deposits; Water additive which promotes strong teeth; Discharge from fertilizer and aluminum factories
NITRATE (NO ₃ -N) (ppm)	10	10	0.35	0.35	No	Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits

Radioactive Contaminants

Contaminant (units)	MCL	MCLG	Level Found	Range	Sample Date (if prior to 2021)	Violation	Typical Source of Contaminant
GROSS ALPHA, EXCL. R & U (pCi/l)	15	n/a	0.8	0.8	4/6/2020	No	Erosion of natural deposits
RADIUM, (226 + 228) (pCi/l)	5	0	0.4	0.4	4/6/2020	No	
COMBINED URANIUM	30	n/a	0.4	0.4	4/6/2020	No	

PFAS Contaminants with a Recommended Health Advisory Level

Perfluoroalkyl and polyfluoroalkyl substances (PFAS) are a large group of human-made chemicals that have been used in industry and consumer products worldwide since the 1950. The following table list PFAS contaminants which were detected in your water and that have a Recommended Public Health Groundwater Standard (RPHGS) or Health Advisory Level (HAL). There are no violations for detections of contaminants that exceed the RPHGS or HAL. The RPHGS are levels at which concentrations of the contaminant present a health risk and are based on guidance provided by the Wisconsin Department of Health Services.

Typical Source of Contaminant: Drinking water is one way that people can be exposed to PFAS. In Wisconsin, two-thirds of people use groundwater as their drinking water source. PFAS can get in groundwater from places that make or use PFAS and release from consumer products in landfills.

Contaminant (units)	RPHGS or HAL (ppt)	Level Found	Range
PFPeA (ppt)	n/a	1.39	0.96 – 1.39
PFHpA (ppt)	n/a	1.22	nd – 1.22
FOSA (ppt)	20	12.4	1.87 – 12.4
PFBA (ppt)	10000	2.94	1.23 – 2.94
PFBS (ppt)	450000	0.73	nd - 0.73
PFHXS (ppt)	40	1.09	nd – 1.09
PFHXA (ppt)	150000	1.82	nd – 1.82
PFNA (ppt)	30	0.50	nd – 0.50
PFOS (ppt)	20	2.62	1.63 – 2.62
PFOA (ppt)	20	3.20	1.78 – 3.20

Contaminants with a Public Health Groundwater Standard, Health Advisory Level, or a Secondary Maximum Contaminant Level

The following table lists contaminants which were detected in your water and that have either a Public Health Groundwater Standard (PHGS), Health Advisory Level (HAL), or a Secondary Maximum Contaminant Level (SMCL), or both. There are no violations for detections of contaminants that exceed Health Advisory Levels, Public Health Groundwater Standards or Secondary Maximum Contaminant Levels. Secondary Maximum Contaminant Levels are levels that do not present health concerns but may pose aesthetic problems such as objectionable taste, odor, or color. Public Health Groundwater Standards and Health Advisory Levels are levels at which concentrations of the contaminant present a health risk.

Contaminant (units)	SMCL (ppm)	PHGS or HAL (ppm)	Level Found	Range	Typical Source of Contaminant
CHLORIDE (ppm)	250	n/a	17	16 - 17	Runoff/leaching from natural deposits, road salt, water softeners
SULFATE (ppm)	250	n/a	22	21 - 22	Runoff/leaching from natural deposits, industrial wastes
ALUMINUM (ppm)	0.2	n/a	0.012	0.011 – 0.012	Residue from water treatment processes; erosion of natural deposits
ZINC (ppm)	5	n/a	0.019	nd – 0.019	Corrosion of household plumbing systems; erosion of natural deposits
TOTAL DISSOLVED SOLIDS (ppm)	500	n/a	180	160 - 180	Runoff and leaching from natural deposits; seawater influence
pH	6.5 – 8.5	n/a	7.7	7.6 – 7.7	Runoff and leaching from natural deposits; seawater influence

Turbidity. In accordance with s. NR 810.29, Wisconsin Administrative Code, the treated surface water is monitored for turbidity to confirm that the filtered water is less than 0.1 NTU/0.3NTU. Turbidity is a measure of the cloudiness of water. We monitor for it because it is a good indicator of the effectiveness of our filtration system. During the year, the highest single, entry point turbidity measurement was 0.02 NTU. The lowest monthly percentage of samples meeting the turbidity limits was 100 percent.

Cryptosporidium. Green Bay Water tests monthly. At no time was there any detection for cryptosporidium on the raw or tap water.

Other Compliance

Monitoring Violations

Description	Contaminant Group	Sample Location	Compliance Period Beginning	Compliance Period Ending
Failed to collect raw water bacteriological sample from Emergency Well 4	Microbiological	Well 4	1/1/2023	3/31/2023

We are required to monitor your drinking water for specific contaminants on a regular basis. Results of regular monitoring are an indicator of whether or not your drinking water meets health standards. During the first quarter of 2023 we did not collect a bacteriological sample from our Emergency Well 4 in time. This monitoring allows us the option of immediately placing the well online if there is an emergency. As soon as we realized the sample was missed, we collected a sample and results show it met standards. In addition, we did not run this well during this time period.

Definitions

Term Definition

- AL Action Level: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.
- HAL Health Advisory Level: The concentration of a contaminant which, if exceeded, poses a health risk and may require a system to post a public notice.
- MCL Maximum Contaminant Level: The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.
- MCLG Maximum Contaminant Level Goal: The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.
- pCi/l picocuries per liter (a measure of radioactivity)
- ppm parts per million, or milligrams per liter (mg/l)
- ppb parts per billion, or micrograms per liter (ug/l)
